Product roadmap, Q4 2026 to Q3 2027

A filled in example. Replace every line with your own. Published by VoteFirst, free to copy and change.

Now, Next and Later

Now, in build	Next, agreed	Later, still an option
Search the board by request title Customers scroll the whole list to check for a duplicate and file one anyway, so the same idea arrives three times with the votes split between the copies. 41 votes, 6 comments, about two weeks of work.	**Single sign on for the public board** Enterprise buyers ask in the first call and it stalls the deal until somebody promises a date. 62 votes, 14 comments, the largest item on the list.	**Dark theme for the public board** Asked for often, and by nobody who would leave over it. It is on the list because it is cheap, not because it is urgent. 19 votes, 2 comments.

The same plan, by quarter

Theme	Q4	Q1	Q2	Q3
Finding things	Search the board	Saved filters		
Getting in		Single sign on	Directory sync	
Getting data out	Voter export		Scheduled reports	
Keeping it clean	Merge duplicates			Archive rules

What we are not doing, and why

Asked for	Why not this time
A mobile app	The board is used on a phone and works there. An app adds a release cycle and two stores for something the browser already does.
Custom fields on every request	Three customers asked and each wants a different field. We would be building a form builder, and that is a different product.
Threaded comments	Comment threads on a feedback board turn into a forum nobody moderates. Worth revisiting if the comment count per request keeps climbing.

Every item carries the problem behind it, the number of people who asked, and a rough size. A roadmap that lists features without the problem behind them is a wish list, and that is the reason roadmap documents get argued over rather than used. The no list saves more meetings than the yes list.

This example is published by VoteFirst at https://votefirst.app/en/tools/product-roadmap-template and may be copied, changed and used commercially with no attribution. The editable versions are there too, as a spreadsheet, a CSV and a PowerPoint deck.
